

ASSABIAN RITES

By Jonathan Drake

Sorcerous Lore, Spells and Skills for the Thennla Campaign Setting

Part Three: Enchantment

This article seeks to set out some general guidelines and a set of new sorcery spells that will help Games Master and players alike create arcane artefacts, enchanted locations, magical traps and enhanced monsters. All these things add colour and flavour to the setting, but I find them especially useful when designing and populating scenario locations and treasures. While unique, god-created magical treasures and persistent effects exist in the setting, the majority are man-made and so it's important to know how they are produced, the possible range of effects and limitations. Above all the intention is to provide a framework that is enabling rather than restrictive, and so helps to inspire ideas.

For those familiar with earlier published versions of the setting, the rules here are a much simpler approach, and more easily integrated with the Mythras Core Rules, than those presented in the original Age of Treason setting book published for Legend. Those enchantment rules have been deliberately left

out of Thennla material published under RQ6 or Mythras so far while I looked for ways to capture the same overall approach but in a way that's more easily integrated to the RAW (Rules as Written – Mythras Core). Extending from the core rules is now, in my view, far preferable than dropping in additional subsystems for the setting. The elaborate Enchantment system presented in Age of Treason is now wrapped up into two key enchantment spells: Object of Virtue and Golem (Characteristic).

To make best use of this article you should have access to setting-specific magic guidelines. If you don't have Taskan Empire or Shores of Korantia you can find them in the free/pay-what-you-want Thennla introduction booklet available via DriveThruRPG.

Design Notes

If you are not familiar with the setting, then one key difference to note is the use of the

This product references the Mythras Imperative rules, available from The Design Mechanism at www.thedesignmechanism.com and all associated logos and trademarks are copyrights of The Design Mechanism. Enchant (Object) spell combined with another spell to allow for much longer durations. The game-mechanical reason is to allow for sorcery effects that persist beyond a single encounter. In the standard rules each point of Shaping applied to Duration increases a spell's duration by 1xPOW minutes, so even 10 points of Duration secures only a two-three hour effect depending on the caster's POW. This doesn't really change the range of ways that a spell can be used. The base duration (0 Shaping) of POW minutes automatically exceeds the time-frame of most encounters and falls into 'Local Time' (Mythras Page 69). But even a lot of points spent on Duration doesn't stretch to Strategic Time, so the value of pouring Shaping points into Duration is limited. The practical and narrative difference between, for example, 4 or 7 points of Shaping is hard to see. What the standard scale doesn't allow are magical effects that persist long enough to lurk in the darkness waiting for the unwary adventurer; to curse someone to live as a monster for a year and a day; to throw up an illusion to disguise your lair for a few days while you go out on an adventure; or even to dress your favourite tavern up long enough for an all-night party. These are all things sorcery in Thennla should be able to do, and in my view, that a Games Master wants to be able to set up as challenges for adventurers.

Under RAW the Enchant (Object) spell is one way to achieve that purpose, as it makes a spell it is combined with permanent until cancelled. Another approach is to use the alternative Durations table provided in Mythras Core (Page 163). At the higher end these durations do everything discussed here. However using this as a standard framework for spell duration also avoids limitations that come with having to Combine your spell with Enchant – which increases the Magic Point cost, the Difficulty, and caps the Shaping points that can be used to the Intensity of the Enchant Invocation.

Some caution is needed as this will escalate the power levels of some sorcerers.

Another question that I wanted to know the answer to for the setting: does the death of a caster undo the magic? It's perhaps a rather abstract question in most cases, but there are implications to think about. If magic doesn't survive its maker, there are no sorcerous artefacts waiting to be looted from an ancient tomb, their power still active. If, however, an enchantment survives the death of its creator, then hunting down and killing an evil enchanter who has cursed a village of defenceless peasants doesn't break the spell.

In the rules presented here a magical effect that outlives its creator requires some form of life force to be *permanently* sacrificed for it to do so. Often this is POW, which replaces Magic Points, but sometimes other Characteristics or Attributes are sacrificed.

The Persistence of Magic

In the Thennla setting if an enchantment is fuelled by *Magic Points* set aside by the sorcerer, then at the sorcerer's death his magical creations begin to fade and die because his Spirit (and with it the POW that generates those Magic Points) is no longer present in the mundane world.

However if a sorcerer has taken the great leap into producing permanent enchantments, these have an existence independent of their creator and will survive his death. This is the setting logic behind the sacrifice of POW, and sometimes other Characteristics or Attributes, to create enchantments that will outlast any mortal lifespan and can potentially endure forever.

Enchanters

Those who study, acquire and create magical artefacts either for their own use or for wealthy patrons are called Enchanters.

Specialist enchanters who sell their services or products can make an extraordinarily good living by producing wonderful magic artefacts, but this also comes at personal cost: to the enchanter himself or the poor soul who is Tapped to provide an enchantment's power. Many sorcerers know how to enchant, but for obvious reasons may be loathe to pay the price the cosmos demands of them. Sometimes the specialism of an enchanter lies not so much in what they produce, but in their expertise in empowering those products.

In the Holy City of Djesmir, A small number of Enchanters keep shop in The Street of Jewels, along a raised terrace noted for its human, physical and magical security measures. They may be able to produce enchanted items to order, but also trade in items that have become separated from their former owners.

Every major Sorcery college includes Enchanters among its ranks, and some independent orders and brotherhoods may have grown up around a Grimoire of enchantments.

The Enchantment Trait

Enchantment is a new trait for sorcery spells in the Thennla setting. Certain specialist spells have this trait as standard. Other sorcery spells can be given the trait by combining them with the Enchant (Object) spell. This trait confers the following features:

- If the Duration component is modified, the spell's duration is set using the Game World Time table

- The spell can now be manipulated using the Conditions component
- The spell's casting time is measured in Minutes, but the sorcerer can rush the casting to achieve in Rounds at a penalty of one difficulty grade harder or take extra care and gain one level easier if taking Hours.
- The spell can be further elaborated as a Ritual Enchantment, rendering it permanent.

The Game World Time Duration Table provides durations based on natural divisions of time. A year is always the old 364-day Lunar year, hence a year and a day is a duration of 365 days.

Game World Time	Shaping Cost
1 hour	1
2 hours	2
3 hours	3
Until Sunset (Or Sunrise)	4
One Day (24 hours)	5
One Week (7 days)	6
Waxing or Waning Moon (14 Days)	7
One Month (28 days)	8
One Season (3-4 months)	9
A Year and a Day (365 days)	10

Conditions

This is an additional spell component available to Enchanters. One Condition can be applied to an enchantment per point of Shaping allocated. Conditions are routinely used as a security measure, to ensure nobody but the creator or intended owner of an enchantment can access its power. But Conditions are also an important part in managing the complexities of long-term and permanent magic effects, especially where an artefact is created that may well pass beyond the enchanter's control or survive his death.

Conditions can be used whenever the Enchant (object) spell is used, or for any spell that is described as an Enchantment or Ritual Enchantment.

The sorcerer's player may make one brief statement for each Condition, usually defining:

- Who the magic can (or cannot) affect, or
- Who can (or cannot) use an item, or
- When the magic will take effect, or when it will cease, e.g. 'will be active only between sunrise and sunset', or 'so long as a descendent of Tark the Reaver has the throne of Morkesh'.

Each statement must be quite simple, and attempts to wrap many differing situations, conditional clauses or exceptions together with clever wording ensure the spell will fail.

Renewing Enchantments

Sometimes a sorcerer will routinely re-cast their enchantments so that they are always active. Perhaps it's something they do every sunset, or every morning – but it could be weekly, seasonal etc. From a book-keeping point of view it is simplest just to record the number of magic points set aside to maintain the spells and assume renewal takes place successfully in downtime. Nevertheless both Games Masters and players should bear in mind that interruptions to routine are commonplace. So while sorcerers using enchantments can arm up with long-running spells, they can also be caught between renewals of their spells, or at least low on Magic Points because they have not yet completed Magic Point recovery from the last casting when they expend more magic points on the renewals.

Ritual Enchantments

To step outside the limitations of time and indeed the sorcerer's own lifespan, the

Cosmos demands of the sorcerer something a bit more substantial than the setting aside of Magic Points. A balance must be maintained, and some part of the sorcerer's being (or of course someone else's, willingly or unwillingly given) must be sacrificed. It also requires a great deal more process and ceremony in keeping with the awesome nature of the magic being worked. A Ritual Enchantment has the following Features:

- The Duration component is fixed at Permanent
- Some aspect of a sentient being's nature, represented by either Characteristic Points or Attribute Points must be permanently surrendered
- The spell can be manipulated with the Conditions component
- The spell's casting time is measured in Hours.

An enchantment that is normally effected by the expenditure of Magic Points must be made permanent by the surrender of the same number of points of Characteristic POW. The surrender of other Characteristic Points and Attributes becomes permanent. If Characteristic Points are lost, Skills, Attributes and Aptitude (the setting cap on skills of 5 x basic percentage) are also reduced accordingly. The cost in Magic Points to cast the spell is paid as normal and recovery begins as soon as the casting is complete

Ritual Casting Time

Default casting time for a Ritual Enchantment is measured in hours. The roll can be made one grade easier by stretching the ritual to Days.

The Sorcerer must be able to maintain focus and concentration on the ritual, or it automatically fails. The ritual usually involves a suitably prepared space with specialised equipment (and sometimes costume), and should be free from risk of interruption.

Terminating an Enchantment

Ending an enchantment early is not straightforward as it is for other spells. The sorcerer must be within Range of the original casting and succeed in an Invocation roll. The process takes a round per Magic Point invested, and only when it completes can the sorcerer begin to regain their Magic Points in the normal way.

Permanent Enchantments can only be ended by the destruction of the thing that is enchanted. Characteristic and Attribute Points invested in the object are dissipated and lost forever. However If this happens in a controlled fashion, the Enchanter can regain the invested life forces by succeeding in a Hard Invocation roll for each.

The Enchanter's Grimoire

Here are some examples of spells that have the Enchantment trait. There is no need to Combine them with the Enchant (Object) spell. Those that are noted as 'Ritual Enchantments' only have a permanent version.

(ANIMAL) SERVANT

Enchantment, Resist (Willpower)

Also known as Create Lesser Familiar, the caster bestows one point of INT of his own to an INS-based creature, converting its INS to INT. The target of the spell can have a SIZ no greater than its Intensity.

The creature is now her servant, and becomes telepathically connected at a distance up to the Range of the spell when cast. The animal servant can be given detailed instructions, and the caster gains access to what the animal servant can sense and feel.

At the end of the spell's duration the INT is restored to the caster, the bond is broken and the creature returns to normal.

Each instance of this spell is specific to a particular type (genus) of animal. It is known there are versions that can be used on hive mind entities such as swarms of insects.

ANIMUS

Enchantment

Animus invests an inanimate object or place with a 'motivating will' capable of activating magical and physical effects. If provided with a source of Magic Points an Animus can trigger uses of a spell matrix, usually in keeping with Conditions set by the enchanter.

If combined with Transfer Magic an Animus can be used to maintain concentration spell effects, freeing the caster for other things. In creating the Animus the caster can set Conditions under which Concentration will be dropped or re-established.

The most important use of this spell is to 'awaken' a golem, and make it capable of independent action. In this case the target must at least have STR, CON, DEX and INT characteristics. Upon being awakened with the Animus spell, the Golem's INT is converted to INS.

The golem's SIZ can be no more than 3 x the spell's Intensity. If a golem is to be created from insubstantial substances such as air, fire or darkness, the Sculpt (Substance) spell must be combined to define the form of the golem and enchanter must also bestow SIZ upon it to fix its form.

CREATE FAMILIAR

Ritual Enchantment Resist (Willpower)

A bespoke Enchantment spell used on a creature with a SIZ no greater than 3 times the Intensity of the spell. The sorcerer bestows the prospective familiar with one point of INT of his own, converting its INS to INT; and a minimum of 1 point of CHA, in accordance with the Golem Characteristic conversion table.

With its new-found INT the creature becomes capable of rational thought and with its new CHA the creature becomes capable of meaningful interaction with other rational creatures. Familiar and Sorcerer are mentally and emotionally linked so long as the familiar and sorcerer are within the Range of the spell from one another. The familiar completely empathises with its master and is able to communicate telepathically with him.

The sorcerer may use the familiar's Magic Points so long as he is within the spell's Range, but may not reduce them below species minimum POW.

The familiar gains an Obedience (Master) Passion equal to 30+INT+CHA but is quite capable of acquiring other passions that are less convenient for the enchanter. The familiar can also learn new skills including magical skills in its own right.

If either sorcerer or familiar fumble a Willpower role when resisting a magical attack, the other must succeed in a resistance role or also be affected. If the familiar is killed, then the sorcerer will suffer deep psychological and physical shock. The Games Master should look for interesting ways for this to be reflected in play. The Diseases and Poisons table in Mythras core rules provide some useful examples of possible effects.

GOLEM (CHARACTERISTIC)

Ritual Enchantment

This spell imparts a characteristic to an object or entity that does not normally possess it. A separate version of the spell is used for each Characteristic, however it is usual for several such spells to be found together in a single grimoire. Each Characteristic Point sacrificed to the target yields a variable number of points in the target according to the spell's Intensity. If the Characteristic Points are provided by a third party – willingly or not – then the number

of Characteristic Points deemed to be being sacrificed is equal to one fifth of those drained from the donor in keeping with the normal

Golem Characteristic Table	
Intensity	Characteristic gain per point invested
1-3	1d3
4-6	1d4
7-9	1d6
10-12	1d8
13+	1d10

yields of the Tap (Characteristic) spell.

GOLEM (SKILL)

Enchantment

The spell imparts a skill to a Golem. The target must possess whichever characteristics form the base chance for the skill. If the skill requires two different Characteristics, the Golem must possess both. At least one Characteristic required for the skill must have been imparted with the Golem (Characteristic) spell, so Golem (Skill) would not work to grant a new professional skill to a Player Character or NPC.

The Golem's starting percentage in the skill is equal to the base chance times x1 for every 3 points of Intensity of the spell. A 'dumb' Golem incapable of independent action can nevertheless Augment the skill of a user. A classic example is a Golem sword with a Combat Style of 75% which provides its wielder with a + 15% bonus when using it to attack an enemy. It could equally be a Golem abacus that lends its user a bonus to their Accounting skill rolls.

OBJECT OF VIRTUE

Ritual Enchantment

This is the classic rite of Enchantment within Assabian sorcery and is analogous to the Transmute spell used in alchemy. It is only found in Grimoires belonging to professional

enchanters. Object of Virtue transforms a mundane object into something magical. The must invest part of his own being (or of an unfortunate Tap victim) to bestow the required Golem Characteristics on the target with which it will help or hinder whoever wears, carries or uses it.

Each Characteristic Point bestowed on the Object of Virtue yields a number of Characteristic Points based on the Intensity of the spell in accordance with the Golem Characteristics Table. Bestowing a Characteristic on an object with this enchantment does not alter its physical nature or appearance.

The Enchanter's player must state at the beginning of the process what he proposes to enchant, which Characteristic is to be invested and how many points; the specific Virtue that is to be created; and what Conditions he is attempting to work into the enchantment.

The object to be enchanted should in some way be appropriate to its task. So for example Virtue of Smiting is applied to a weapon, or perhaps to a glove or gauntlet. The nature of the object may become important in play if it could be damaged, stolen or disarmed. There is no need for it to be of significant intrinsic value, made from rich and precious materials, but Objects of Virtue often are, as they are crafted for a paying customer. If the Enchanter requires a unique example of whatever object or creature he intends to enchant this alone may take a lot of time and expense.

An object's Virtue boosts the user's Characteristic score with its own for the purpose of calculating an Attribute. The standard Virtues are as follows:

Virtue of Alertness The object's INT is added to the user's for the purpose of calculating Initiative

Virtue of Speed: The object's DEX is added to the user's DEX for the purpose of calculating Action Points

Virtue of Health: The object's CON is added to the user's CON for the purpose of calculating Healing Rate

Virtue of Smiting: The object's STR is added to the user's STR for the purpose of determining Damage Bonus

Virtue of Fortitude: The object's CON is added to the user's CON+SIZ for the purpose of determining the user's Hit Points per location

Virtue of Wisdom: The object's CHA is added to the user's CHA for the purpose of determining Improvement Rolls

Virtue of Magic: The object's POW is added to the user's for the purpose of determining Magic Points

Virtue of Fortune: The Object's POW is added to the User's for the purpose of determining Luck Points

Virtue of Unburdening: The Object's STR is added to the User's for determining the ENC they can carry without being Burdened or Overloaded, or the base SIZ they can lift or drag before modification by their Brawn skill, or the distance that an object can be thrown.

Virtue of Stamina: The Object's CON is added to the user's CON for the purpose of determining how long they can sustain activity before having to make an Endurance roll to avoid gaining a level of fatigue.

There are very rare examples where the same object has more than one Virtue, however this must be achieved by casting the spell more than once. In normal circumstances, each Characteristic score possessed by the object can only support one Virtue.

SOUL JAR

Ritual Enchantment

As described in Mythras, this necromantic spell requires the permanent sacrifice of Hit Points, and is a permanent enchantment.

SPELL MATRIX ENCHANTMENT

Enchantment

An item can be enchanted to store one or more castings of the same spell with which this spell is Combined. The item has a number of charges (uses) equal to the Targets manipulation applied. Anyone grasping the enchanted item who is not excluded by the Conditions (if any) placed upon the item by the enchanter can release the spell as a single Action with a single Target. The Invocation chance is the lower of the creators Invocation skill in Speel Matrix Enchantment or in the spell the object is storing. The Magic Points required are drawn from the user, and if the user doesn't have enough then the device fails.

If the Enchantment is made permanent then the spells it holds become reusable. The item will regain charges at the rate of Intensity/5 per day. However there are exotic versions or limitations that may require special conditions to recharge – such as immersion in blood, exposure to moonlight, or being sung to...

An Adventurer who finds a spell matrix will have to work out its purpose and how it functions before being able to use it. A suitable Lore (Mundane Arcana) usually suffices, although the Games Master may allow characters without access to this skill a certain amount of trial and error. Once the user is familiar with how to use the item, they can trigger the device's power at will so long as they are possession of it.

TRANSFER MAGIC

Enchantment, Resist (Willpower)

When combined with a spell with the Concentration trait, Transfer Magic places

control of the Concentration spell in the hands of someone or something other than the original caster. The target becomes able to activate or terminate a magical effect that would normally be under the caster's control. The entity to which control it is transferred must have either an INS or INT characteristic (however see the Animus spell for an exception). All other aspects of the spell remain governed by the caster's skills and abilities and cannot be changed by the recipient of the transfer. This spell can be used to give life to an animated statue, transferring control of an Animate (substance) spell to a spirit bound to it. Another is to transfer control of a Wrack spell to a prison guard.

Using Tap to fuel Enchantments

Given the price to be paid to create an enchantment, an enchanter may well wish to pass the cost on to someone, or something else. The Tap spell only works on sentient beings – that is one which possesses all three Characteristics of INT, POW and CHA. It does not work on dumb animals. A Sorcerer who uses the Tap (Characteristic) spell to provide the necessary Characteristic Points to make an enchantment work rather than draw it from his own being is usually regarded as malevolent. Nevertheless there are some legal grey areas over this that allow local rulers to turn a blind eye to the practice. For example the use of condemned criminals is broadly sanctioned. It's a commercial exchange in which half the money paid by the sorcerer for access to the criminal is kept by the Sultan, the other half is paid out to the condemned person's family (if they have one). If the condemned has committed crimes such as murder or robbery, then the family's share may be diverted to the victim or their next of kin by way of compensation.

The use of slaves for tapping is usually tolerated in Djesmirket so long as the Tap is not made permanent. However this is an area where abuse can often be hidden successfully. In the Sultanate of Jelhai there are few limitations on how a master treats a slave, and the purchase of slaves for permanent tapping, or use of those slaves who have otherwise outlived their economic usefulness, is commonplace. Sometimes a free person in desperate straits will sell a part of themselves to a sorcerer simply as a means of survival.

In order to be effective, the Tap spell must be Combined with whatever enchantment spell or ritual the unfortunate victim is being used to provide the Characteristic Points for. The victim needs to be present at the climax of the ritual if not all the way through. The victim can resist using Willpower, and the use of drugs and other means to prevent that roll being successful is commonplace.

Using someone else's Characteristic Points to fuel an enchantment is not always possible. Animal Servant, Create Familiar, Soul Jar, and Write Magic will simply not work if the Attributes or Characteristic Points bestowed on the enchantment do not come from the sorcerer's own person.

Enchantment Pools

Some Assabian enchanters sidestep the complex process of running extended duration spells, but instead create a pool of magic points to maintain their creations. This pool, similar to the devotional pool used by theists, is a Gift granted by Sozoputra, a god-demon of Djesmir. The enchanter dedicates Magic Points to their pact with the demon, and instead of using Duration can assign any spells with the Enchantment trait to this magic point pool.

The pool must have enough unassigned magic points equal to the Magic Point cost of the

enchantment vesting. All spells so assigned will last indefinitely, maintained by Sozoputra's Gift, unless the enchanter dies, or the pact is terminated in some other way. However the Enchanter can, with a successful Invocation roll for each enchantment, decide to cancel the spells to make way for new enchantments.

The Enchanter can only use personal Magic Points to fuel the Enchantment Pool. The magic points to actually cast the Enchantment can be supplied from any source available, and recovered or replaced in the normal way.

Members of the Court of Colours, the premier sorcery order in Djesmirket, can access this Gift when they become Adepts (proven members), by dedicating at least 3 Magic Point to the pool. Their rank within the order determines the maximum number of magic points they are allowed to dedicate to the gift: one third for Adepts, one half for Masters, and unlimited for Grandmasters.

The price to be paid for this gift for those who are not part of a formal order of enchanters can be very varied, and usually involves a quest or dangerous errand for something the demon wants. Most likely an enchantment for her collection, or the extinction of an enchanter who Sozoputra has taken a dislike to. Other demons and deities may also be able to offer this gift, but for the Court of Colours an exclusive arrangement with Sozoputra has long been a mutually beneficial arrangement

Enchanting A Person

A Sorcerer can enchant another person, or even herself. The Corruption rules (see Mythras Companion) should be used whenever someone or something is *permanently* enhanced or changed through Magic. Corruption effects are cumulative, and accelerate the further beyond normal human limitations the sorcerer goes. Psychological

effects set in even before that stage. For any Characteristic score of 19 or above, the character concerned should gain an unhelpful personality trait expressed as a Passion. If enchantment of a person takes a Characteristic or Attribute to a level not normally possible under game and setting rules, for example: permanently boosting a skill to a level that exceed the recipient's Aptitude (their basic percentage x 5); or a Characteristic permanently fixed above species maximum (21 for humans); then the recipient of the enchantment has become something more, or less, than human. When the owner of an enchantment it descends into obsessive or destructive behaviour, it is often said that the enchantment itself may be cursed – but in reality the cause is usually the owner's inability to deal with the power it provides.

Enhancements of STR, CON, SIZ and DEX – for example by the Tap spell or Enhance (Characteristic) will cause physical corruption; and INT, POW or CHA will cause mental corruption.

For every 3 points, or fraction thereof, that a Character's attributes are permanently enhanced in excess of 21 a form of corruption sets in or an existing trait gets more serious.

GOLEM

An awakened golem is an independent entity, and while it may obey its creator's commands, it nevertheless is not a mere extension of his will. A Golem is classically sculpted into a humanoid form from some suitable material – but this is not a requirement. It can have any shape the Sorcerer wants it to have, so long as its shape is basically fit for the intended purpose.

Golems can be created gradually, adding more Characteristic using the Golem (Characteristic) enchantments, but the same Characteristic

cannot be enchanted twice. When the enchanter is ready, the Golem can be 'awakened' using the Animus spell.

The Golem will have a base Movement in keeping for a creature of similar shape, however the material of which it is made could limit its Movement rate or alternatively grant it advantages in certain environments.

The material from which the Golem is constructed will affect its Armour Points and may impart other strengths and vulnerabilities.

Material	Traits and Features
Flesh Golem	None
Ice Golem	5 AP Takes double damage from any heat-based attack Movement cap 1 per 3 DEX
Clay Golem	4 AP Vulnerable to water damage
Iron or Bronze Golem	8 AP Movement cap 1 per 3 DEX
Wood Golem	4 AP
Stone Golem	10 AP Movement cap 1 per 3 DEX

Awakened Golem Attributes

If a Golem has the required Characteristics to it gains the associated Attribute. A Golem's Attributes are calculated as follows:

- Damage Modifier: STR x2;
- Experience Modifier: None;
- Hit Points: CON + Intensity, A Golem does not have HP per location;
- Healing Rate: CON + Intensity
- Initiative: Average of DEX and INS
- Luck Points: None

- **Movement Rate:** the GM should assign a Movement rate appropriate to the shape, size and form of the Golem using comparable creatures as a benchmark. Particularly rigid, inorganic and heavy materials should have a maximum Movement Rate of 1 per 3 DEX
- **Strike Rank:** Average of INS and DEX

If the awakened golem has the necessary Characteristic scores to form the Basic Percentage in a Standard Skill it will automatically gain the skill at basic percentage x 1 per 3 Intensity of the Animus spell used. Golem Standard Skills are: *Brawn*, *Evade*, *Unarmed/Natural Weapons*. All other skills are treated as Professional Skills and the Golem must be given those through magical means, usually the Golem (Skill) spell.

CLAY GOLEM

This simplest of golems is nevertheless a durable and versatile platform for an Enchanter to press into service. Examples have been known that have served as mute and incorruptible jailors, tireless porters, labourers or builders, or even, if fashioned to an

appropriate shape, a mount. Queen Tursiba's Axe-Bearers, a military unit from Llargil, has an ancient clay golem as its battle mascot which is also furnished with an Attract Missiles enchantment.

Clay Golem Intensity 8

	Dice	Average	1D20	Hit Loc	AP/HP
STR	5D6	18	01-20	Body	4/22
CON	4D6	14			
SIZ	20	20			
INS	2D6	7	Actions		1
POW	-	-	Damage Modifier		+1D6
DEX	2d6	7	Strike Rank		7
CHA	-	-	Magic Points		0
			Movement		3
<i>Weapon</i>	<i>Size/Force</i>	<i>Reach</i>	<i>Damage</i>		<i>AP/HP</i>
Fist	M	M	1d4 + 1d6, Stun Location		As body

Skills: Brawn 108%, Evade 42%, Unarmed 75%

Traits: Immune to Bleed, Stun; Impaling weapons that penetrate armour are lodged in the Golem's body but deliver no additional wound effects or penalties. Immune to poisons, diseases, and any effect or spell that would normally require a resistance roll using Willpower or Endurance

BRONZE GOLEM

This is a golem finely tuned for a combat role, and created by an evil sorcerer of significant expertise to protect her most precious treasures for eternity. The Characteristic Points required have been furnished by unwillingly by a convicted murderer and three

children grabbed off the street. Its arms are formed into deadly blades, its bronze construction ensures both that it endures through the centuries and provides tough armour. Most importantly, it has been endowed with the Instinct of Combat, and is very proficient with its weapons.

Bronze Golem Intensity 10

	Dice	Average	1D20	Hit Loc	AP/HP
STR	4D8	18	01-20	Body	8/19
CON	2D8	9			
SIZ	15	15	Actions	3	
INS	3D8	14	Damage Modifier	+1D4	
POW	-	-	Strike Rank	14	
DEX	3d8	14	Magic Points	0	
CHA	-	-	Movement	5	
<i>Weapon</i>	<i>Size/Force</i>	<i>Reach</i>	<i>Damage</i>		<i>AP/HP</i>
RH Blade	M	M	1d6+1d4, Bleed		As body
LH Blade	M	M	1d6+1d4, Impale		As Body

Skills: Brawn 128%, Evade 112%, Unarmed 128%, Blade Combat 128%

Traits: Immune to Bleed, Stun; Impaling weapons that penetrate armour are lodged in the Golem's body but deliver no additional wound effects or penalties. Immune to poisons, diseases, and any effect or spell that would normally require a resistance roll using Willpower or Endurance
